US-09-851-422B-8 39 Title: Perfect score:

BLOSUM62 Gapop 10.0 , Gapext 0.5 Scoring table:

1 VPHNESE 7

Sequence:

262574 Total number of hits satisfying chosen parameters:

262574 segs, 29422922 residues

Searched:

Minimum DB seq length: 0 Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database :

Pred. No. is the number of results predicted by chance to have a core greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  38-JUL-1999
   The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated that altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells of appressing the proteins are useful for identifying aperate (agonists and antagonists) that bind to them. Cells of the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to abstrant expression or physiological interactions of the polypeptides and calls generically engineered to express them are also useful for producing the proteins of the proteins are useful in generic vectination, testing and thereby, and can be used as nutritional supplements. They may be used to the used as nutritional supplements. They may be used to confirm the moder and or nerve tissue growth or regeneration; bone, cartilage, tendon and/or nerve tissue growth or regeneration; confirmed to leaves and in bone, cartilage, tendon and/or stimulation; as anti-inflammatory agents; and in treatment of leavest stimulation; as anti-inflammatory agents; and sequences of novel human secreted proteins of the inventom.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                                                                                                                                                                                                                                                     ö

PT comprises two subunits each having a mol. wt. of 45-50 kD (SDS-PAGB). The tryptic digests of the alpha unit are represented in AAR14712-17, and of the beat unit in AAR14718-2.

The FT enzyme can be used to isolate inhibitors. Such inhibitors can be used to isolate inhibitors. Our hinbitors can be used to block the attachment of farnesyl gps. to ras process states to calls of patients suffering with cancer or pre-encerous states to treat or pallate the cancer.

Per sand AR1571-13, AMR1571-81 and AAQ1441-41.

The cDNA (AAQ44397) and amino acid (AAR49739) sequences of rat farnesyltransferase (FT) alpha-subunit were determined. The CDNA may be used to produce recombinant FT, useful for screening potential anticancer agence that prevent expression of palras.

```
The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (11) in a test sample comparing the expression profile of a gene group in the sample comparising genes selected from (1). The method isc useful for examining the ischaemic condition (e.g. compression ischaemia, occlusive ischaemia or vacopastic ischaemia) by measuring expression profile of particular genes (AB199202 to AB199912, encoding the protein sequences in ABB5002 to ABB57030 to ABB570
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              condition related sequence,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mouse ischaemic condition related protein sequence SEQ ID NO:375.

                                                                                                                                                                                                                                                                             AAR7839 is the alpha subunit of tat farnesyl transferace which is involved in the farnesylation of various callular proteins including the cancer ratated ras proteins. It is used to produce the compete farnesyl transferace molecule which is used to demonstrate the affectiveness of poptide inhibitors capable of inhibiting framesyl transferace. The peptide inhibitors are useful for transity cancers and reservable concers in particular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

It is used to produce the complete farmesyl transferase molecule which is used to demonstrate the effectiveness of peptide inhibitors capable of inhibiting farmesyl transferases. The peptide inhibitors are useful for
                                                                                                                                                                                The CDNA encoding the human alpha subunit of FPTsse was isolared from a human placental cDNA library in lambda gill using a bourder FPTsse comba gill using a bourder frame can be used to assess the inhibitory existy of a goo, in the Farsesylation of a procein substrate. The seasy can be used to identify anticancer agence.

The enzyme was used in a method for identifying FT inhibitors. The method involved screening candidate compounds for the ability to inhibit the transfer of a farnesyl moiety to a K-ras B protein. FT inhibitors act by blocking the attachment of prenyl groups to ras proteins in malignant cells of patients suffering from cancer or precancerous states, and as such are used to treat such conditions.
